## How to pass an Object from One Activity to another in Android.

Hello all

This is a simple post that shows How to pass an Object from One Activity to another in Android.

I am going to pass the following object from One Activity to another.

```
MyObject{
```

```
    String name;
```

```
    String website;
```

```
}
```

This is the class that defines the Object.

```
package com.coderzheaven.passarraylist;
```

```
import android.os.Parcel;
```

```
import android.os.Parcelable;
```

```
public class MyObject implements Parcelable{
```

```
    String name,website;
```

```
    public MyObject(){
```

```
}
```

```
    private MyObject(Parcel in){
```

```
        this.name = in.readString();
```

<http://coderzheaven.com>

```
this.website = in.readString();

}

public String getWebsite() {
    return website;
}

public void setWebsite(String website) {
    this.website = website;
}

public String getName() {
    return name;
}

public void setName(String name) {
    this.name = name;
}

@Override
public int describeContents() {
    return 0;
}
```

<http://coderzheaven.com>

```
@Override  
public void writeToParcel(Parcel dest, int flags) {  
    dest.writeString(this.name);  
    dest.writeString(this.website);  
}  
  
public static final MyObject.Creater<MyObject> CREATOR = new  
MyObject.Creater<MyObject>() {  
  
    public MyObject createFromParcel(Parcel in) {  
        return new MyObject(in);  
    }  
  
    public MyObject[] newArray(int size) {  
        return new MyObject[size];  
    }  
};  
}
```

This is the first activity that sends the object to second activity.

```
package com.coderzheaven.passarraylist;  
  
import android.app.Activity;  
import android.content.Intent;  
import android.os.Bundle;  
import android.view.View;  
import android.view.View.OnClickListener;
```

<http://coderzheaven.com>

```
import android.widget.TextView;

public class MainActivity extends Activity {

    @Override
    public void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        this.setTitle("Main Activity");

        final MyObject myobj = new MyObject();
        myobj.setName("Coderz");
        myobj.setWebsite("CoderzHeaven.com");

        TextView name = (TextView)findViewById(R.id.name);
        name.setText("Name : " + myobj.getName());

        TextView website = (TextView)findViewById(R.id.website);
        website.setText("Website : " + myobj.getWebsite());

        findViewById(R.id.button1).setOnClickListener(new OnClickListener() {
            @Override
            public void onClick(View v) {
                Intent intent = new Intent(MainActivity.this, Second.class);
            }
        });
    }
}
```

<http://coderzheaven.com>

```
        intent.putExtra("myobject", myobj);
        startActivity(intent);
    }

});
```

}

}

This is the second Activity.

```
package com.coderzheaven.passarraylist;
```

```
import android.app.Activity;
```

```
import android.os.Bundle;
```

```
import android.widget.TextView;
```

```
public class Second extends Activity {
```

```
    @Override
```

```
    public void onCreate(Bundle savedInstanceState) {
```

```
        super.onCreate(savedInstanceState);
```

```
        setContentView(R.layout.second_activity);
```

```
        this.setTitle("Second Activity");
```

```
        Bundle b = getIntent().getExtras();
```

<http://coderzheaven.com>

```
if(b!=null){  
  
    MyObject myobj = (MyObject) getIntent().getExtras().getParcelable("myobject");  
  
    TextView name = (TextView) findViewById(R.id.name);  
    name.setText("Name : " + myobj.getName());  
  
    TextView website = (TextView) findViewById(R.id.website);  
    website.setText("Website : " + myobj.getWebsite());  
}  
}  
}
```

activity\_main.xml.

```
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"  
    xmlns:tools="http://schemas.android.com/tools"  
    android:layout_width="match_parent"  
    android:layout_height="match_parent" >
